Contract Type vs Churn

Count of customerID by Contract and Churn

Churn ● No ● Yes

- Month-to-month customers have the highest churn
 - Long-term contracts (1–2 year) have much lower churn
- Meaning: Lack of a long-term contract makes it easier for customers to switch away

Technical Support vs Churn

Count of customerID by TechSupport and Churn

Churn ● No ● Yes

- Customers with no tech support discontinue the service more
 - Customers with support stay longer
- Meaning: Poor service support increases dissatisfaction and exit rate.

Security Features vs Churn

Count of customerID by OnlineSecurity and Churn

Churn ● No ● Yes

Count of customerID by OnlineBackup and Churn

Churn ● No ● Yes

• Customers without security features like online security and online backup tend to discontinue the service more
Meaning: Value-added services increase retention rate

Payment Method vs Churn

Count of customerID by PaymentMethod and Churn

Churn ● No ● Yes

- Electronic check users churn the most
- Automatic payment methods show better retention

Meaning: Manual payment users are less engaged or less satisfied

Internet Service vs Churn

Count of customerID by InternetService and Churn

Churn ● No ● Yes

- Fiber optic users show higher churn rates
- DSL customers have better retention

Meaning: Service expectations and pricing may influence churn behavior

Churned_customers by tenure

- Customers with lower tenure, particularly within the first 12 months, exhibit the highest churn rates.
- Long-term customers show significantly better retention and loyalty toward the service.

Meaning: Customer churn is highest during the early stages of the customer lifecycle, highlighting the importance of improving onboarding experience and early customer engagement.

Churned_customers by Contract

This tree map visual shows that customers with month-to-month contracts have the highest churn rates, whereas customers with longer contract periods demonstrate better retention. This indicates that promoting long-term contracts with added benefits could help reduce customer churn.

Count of customerID by Partner and Churn

Churn ● No ● Yes

Count of customerID by Partner

Count of churned customers by partner

Count of customerID by Partner and Churn

Churn ● No ● Yes

Partner indicates whether a customer is married or in a relationship, which may influence their likelihood to stay or churn. The visual suggests that customers with a partner tend to show better retention, possibly due to more stable financial and lifestyle decisions. In contrast, customers without a partner appear more likely to switch services, indicating higher churn tendency.

Count of customerID by tenure

Count of customerID by Tenure Group

Count of customerID by Tenure Group

Count of customerID by tenure

What influences Churn to be Yes ?

Count of customerID by Risk Segment and Churn

High Risk: Month-to-month, low tenure (≤ 12 months), electronic check, no support/security, high churn likelihood

Medium Risk: Mixed tenure (12–48 months) or partial services, moderate churn likelihood

Low Risk: Long-term contract, high tenure (> 24 months), active services (support/security), low churn likelihood

Key Insights and actions:
Customer retention can be improved by focusing on stronger engagement, better service quality, and encouraging long-term customer commitment. Customers on month-to-month contracts, using electronic payment methods, and subscribing to fewer value-added services such as tech support, online security, and online backup show a higher tendency to churn. In contrast, customers with longer contracts and additional services demonstrate better retention, indicating higher engagement and loyalty. This suggests that promoting long-term plans through targeted offers, encouraging automatic payment methods, and improving support and digital services can reduce churn. Additionally, since most customers churn in the early stages of their lifecycle, improving onboarding, early communication, and initial customer experience is critical for increasing retention and customer lifetime value.

Customer Lifetime Thinking:
Customer lifetime analysis shows that most customers have short tenures, with a significant portion leaving within the first 12 months. This indicates that early-stage retention has the greatest impact on overall customer lifetime value. Customers who remain beyond the initial period are more likely to stay longer, highlighting the importance of strong onboarding and early engagement strategies to improve long-term retention and reduce churn risk.
